beauty**

INDIBA® activ in Physio-aesthetics

PHYSIO-AESTHETICS IS THE PHYSIOTHERAPY PROGRAM THAT SEEKS TO PREVENT AND TREAT THE VISIBLE AND HISTOLOGICAL SIGNS OF AGING.

INDIBA® **activ in Physio-aesthetics** works by rebalancing the cell metabolism that makes tissues healthier and with a younger appearance.

INDIBA® **activ** improves microcirculation, decreases oedema, reduces fat deposits and skin flaccidity. Its use after cosmetic surgery contributes to a reduction in scarring, decreased inflammation, haematoma reabsorption and prevents adhesions and fibrosis. Its continued use ensures the effects of surgery lasts as long as possible thereby delaying or preventing future invasive treatment.

INDIBA® **activ Cell Therapy** stimulates the natural healing and recovery mechanisms of tissues in a non-invasive way. This is achieved by using our unique **448 kHz** kHz frequency in combination with both capacitive and resistive mode technology. This forms the basis of the **Proionic® System**.

This system stimulates ion exchange and interacts with cellular electrical activity in a specific manner that allows cell to recover and fulfill their basic functions.

The **Proionic® System** is the basis of our active cell therapy and enhances bio-stimulation, activates microcirculation and promotes metabolic hyperactivation, while respecting natural cell physiology.

healthy beauty

effective and pleasant treatment

INDICATIONS

There are a large number of problems associated with physio-aesthetics where **INDIBA® activ** can have a positive impact, these are particularly indicated in the following:

SKIN TIGHTENING

- Skin flaccidity
- Lifting

BODY SHAPING

- Buttocks
- Breasts
- Abdomen

CELLULITE

- Oedema
- Fibrous
- Adipose

PRE AND POST SURGERY

- Oedema drainage
- Haematoma reabsorption
- Scarring
- Lifting

Antiaging | 5 sessions
